Liâ€™s Fourier factorization rules [J. Opt. Soc. Am. A 13 , 1870 (1996)] should be applied to achieve a fast convergence rate in the analysis of diffraction gratings with the Fourier modal method. I show, however, that Liâ€™s inverse rule cannot be applied for periodic patterns of graphene when the conventional boundary condition is used. Fourier modal method for crossed anisotropic gratings with ... Fourier modal method for crossed anisotropic gratings with arbitrary permittivity and permeability tensors This article has been downloaded from IOPscience.
